IT'S ALL ABOUT YOUR SOLE

Introducing the innovative, internationally-patented OCSystem®. The OC System has been designed in order to increase grip, enabling you to walk comfortably and safely on icy surfaces. The retractable ice grip is integrated into the soles of your boots and features stainless steel studs set within a framework of flexible polyurethane that remains durable even at extreme temperatures. A handy key is provided that enables the wearer to easily and quickly flip the ice grips in or out making this an exceptionally practical boot, suitable for all wintery conditions.

We incorporate the OC System into many of our styles and it is something that helps set our range of winter boots apart from others on the market. Those styles that have been designed without the OC System have all been constructed with a contoured sole which offers excellent grip and stability. Whichever style you opt for, you can be assured that your feet will remain comfortable, warm and happy!

The innovative OCsystem®, versatile non-slip technology that helps you to maintain excellent traction on icy and slippery surfaces, making them the ultimate all-round winter footwear.
